Right-of-Way (ROW) Clearing Notice

Starting in October, vegetation management activities will be occurring along select overhead primary line right of ways (ROW). Starting in Isabella and then moving to the Knife River area, you may see contractors managing the ROW using manual and mechanical means through the fall and winter. The objective of this work is to re-claim the ROW by proactively removing woody vegetation growing under and alongside the power lines to prevent future line interference. The benefits of vegetation management are safe and reliable power, public safety, accessibility for linemen restoring outages and performing routine maintenance, wildfire mitigation, and a decrease in annual outages and duration times due to trees. Thank you for your cooperation. Reach out to the forester Stephanie with any questions. 218-834-7906
